

## NetSuite *SuiteBundler*

The following objects are “bundle-able” via SuiteBundler:

- **Interface**

- User Roles
- Center Links
- Center Tabs
- Custom Centers
- Custom Dashboards

- **Custom, Vertical Reports**

- Saved Searches (list views, summary searches)
- Custom KPI Searches
- KPI Scorecards
- Custom Report Snapshots
- Customized Reports
- Reports Built “From Scratch”
- Scheduled Reports

- **Data & Record Customization**

- Custom Lists (w/data)
- Custom Subtabs
- Custom Forms

- **Database Customization**

- Custom Fields (all types)
- Custom Records/Objects
- Supports 1:1, 1:M, M:M relational record models
- Optionally include data in bundle

- **Scripted Business Processes**

- Client SuiteScript
- Server SuiteScript

- **Custom Applications**

- Suitelets
- SuiteScript UI Objects
- Portlet Scripts

**NetSuite’s breakthrough SuiteBundler** is a key component of SuiteFlex, the NetSuite application development and integration platform. SuiteBundler technology allows ISVs, VARs and SIs to productize their industry expertise, create vertical solutions, and deliver them in a repeatable, cost efficient fashion.

Vertical solutions, add-on applications, end-to-end business process customizations, and integration solutions developed using the other components of SuiteFlex—such as SuiteBuilder, SuiteScript and SuiteTalk—can now be packaged together to create a SuiteBundle, which can in turn be repeatedly installed by customers at the click of a button.

### SuiteBundler Benefits for NetSuite Partners:

- Turn your industry expertise into software: design, build, market, and sell your unique industry solution
- Select from a host of customizations and add-ons to create custom applications for your customers
- Automate the reuse of your customizations
- Deliver faster implementations at a lower cost

### SuiteBundler Benefits for Customers:

- Customers now have access to an industry-specific suite at an affordable price
- Customers can further tailor custom applications to their specific business requirements
- SuiteBundler facilitates faster implementations at lower cost
- SuiteBundler custom applications are flexible and scalable for future changes

### SuiteBundler includes:

- **Bundle Builder** – an easy 3-step graphical assistant for selecting and creating SuiteBundles. Bundle-able components include anything configurable and customizable in NetSuite from the simple elements – such as user roles, Dashboards, custom tabs, custom centers, custom KPIs and Scorecards, custom reports, custom lists and custom forms – to database elements – such as custom fields and custom records/objects – to scripted business process and application development elements – such as client SuiteScript, Server SuiteScript, SuiteScript UI Objects and Suitelets.
- **Bundle Distribution** – You can choose from 3 modes when making SuiteBundles available to customers:
  - **Shared:** Partners creating a SuiteBundle for commercial availability would distribute it as Shared to specific customer accounts that have purchased the solution.
  - **Private:** Customers leveraging SuiteBundler to prototype their own customizations and implementation of new business processes would set availability to Private.
  - **Public:** Developers or even customers can choose to distribute a Public SuiteBundle, fostering an open-source community for sharing small add-on enhancements to NetSuite.
- **SuiteSource Bundle Repository** – partners creating SuiteBundles can leverage the SuiteSource Bundle Repository in their development process to conveniently save the customer-installation-ready version of their SuiteBundle, while continuing to work on the next iteration of their solution in their NetSuite developer account.
- **Bundle Installation** – customers looking to install a SuiteBundle would first locate it by browsing the SuiteSource Bundle Repository or searching by a specific Bundle ID given to them by the partner they purchased the solution from. Once they have located their particular SuiteBundle, installation is as easy as one-click and all the contents of the bundle are automatically inserted into their account. Un-install is also available in SuiteBundler if it turns out that the bundle contents need to be removed. All customizations and solutions deployed using SuiteBundler are seamlessly carried forward with version upgrades, just as is the case with customization changes made directly in NetSuite accounts.
